CoilPro™

Pipe On Pipe Treatment

HELPS MILL ALL PLUGS!

Formulated with ProOne's XPL+ Technology, CoilPro Pipe on Pipe Treatment's positively charged molecule structure bonds to metal, optimizing lubrication. It has a film strength 50 times more powerful than conventional pipe lubricants, withstanding more than 200,000 psi of pressure! This reduces the coefficient of friction between the coil tubing and casing.

Compatible with all drilling fluids, CoilPro offers pipe-on-pipe extreme friction reduction and rheological stabilization. This ensures high drilling efficiency and minimizes well costs in vertical, deviated and horizontal wellbores with coil tubing fluids.

"Previously used another lube but I've never seen a POP perform like ProOne. We cleared all the plugs and it made a huge difference in our bottom line." - Major Operator/ Bakken, November 2014

ADVANTAGES

- Attracted to Hot Spots
- Withstands High Heat (beyond 500°F)
- Reduces Pipe on Pipe Friction
- Unprecedented Film Strength (over 200,000psi)
- Water Dispersible
- Helps Increase WOB
- Environmentally Friendly
- Personnel Friendly - Non-Toxic

TREATMENT

Standard Usage - 1 gallon per 1,000 gallons
Deviated Well - 2 gallons per 1,000 gallons

CoilPro can be easily dispersed and may be added via a hopper directly into the active system or through pre-mixing.

BENEFITS OF USE

- Mill frac-plugs
- Lubricates the entire casing and CT BHA thereby increasing lateral reach
